

S H I E L D

Smart Hazard Identification, Engagement, and Local Detection Platform

A clearer bridge between citizens and government.

People-based

Citizens identify daily problems

Evidence-based

AI, photos, severity, and location

Action-based

Clear ownership and visible progress

Reporting is still fragmented

People want to report quickly, but current channels are scattered, buried in broad civic services, and too form-heavy.

Current government channels create friction

The services exist, but finding the right entry point and completing a report still takes too much effort.

Road and facility issues are still buried inside a broad civic-app and category-heavy reporting path.

登錄路平案件

通報項目

* 為必填資料
本系統受理之通報範圍為路平相關案件(坑洞、凹陷、龜裂、孔蓋破壞不平、交通標線損壞不良等)，若市民朋友有其他市政建議或陳情案件，敬請撥打本府1999市政服務專線或交通局免付費專線 0800-090-234，將由專人為您提供協助。

* 申訴類別

坐標X 坐標Y

A dense manual form slows completion before the case even reaches government follow-up.

SHIELD connects both sides of the response

A focused citizen experience feeds a structured government operations view, with the same case visible from report to resolution.

GOVERNMENT OPERATIONS

Map, severity, reports, analytics, and follow-up in one desktop operating view.

- Report
- Analyze
- Prioritize
- Respond
- Reward

Photo-first reporting with visible status and a clearer mobile reporting path.

Rewards support repeat participation

Verified reports can create points, vouchers, and campaign entries without changing the core government workflow.

Available points

2,480 P

ID verified

Store discount

30 P

Coupon redemption

Drink voucher

1 item

Partner reward

Campaign draw

1 entry

Participation benefit

7-Eleven

Starbucks

FamilyMart

1 Report submitted

2 Verified by government

3 Points credited

4 Voucher redeemed

One connected operating system

The stack follows each case from citizen evidence to government action, then returns status and rewards to the citizen.

Photo-first reporting

Fast input from the people closest to the problem.

Evidence-based prioritization

AI and location context focus attention where it matters.

Structured follow-up

Clear ownership, measurable progress, and visible outcomes.

We start in Taipei. Big city, big impact.

Taipei gives SHIELD a dense, visible proving ground where better issue reporting can improve response quality and reduce manual inspection burden.

Manual inspection can cost about NT\$5,000 per kilometer. SHIELD helps government reduce wasted field effort by turning citizen reports into better-targeted, evidence-based

8.7%

share of Taipei included
value needed for the
first 3-month target

Taipei is large enough to prove demand, measurable outcomes,
and a strong first reference case.

Big city

Taipei has enough density, infrastructure activity, and public visibility to make early adoption noticeable and measurable.

Big impact

A focused Taipei deployment can show faster reporting, clearer prioritization, and lower dependence on broad manual inspection routines.

Budget value

When manual inspection costs roughly **NT\$5,000 per kilometer**, more targeted case routing becomes a strong public-sector cost-saving story.

A loop that involves local knowledge into better infrastructure and quality of life

A clearer illustration of how SHIELD connects citizens, data, government action, and public value in one visible loop.

Business model

Free for citizens. Government subscriptions fund deployment and operations, while reward partners can support incentive campaigns.

LAUNCH

Taipei pilot package
NT\$1,900,000

Focused 3-month deployment

- Dashboard setup
- Citizen reporting flow

YEAR 1

Operations and support
NT\$6,500,000

Deployment, maintenance, iteration

- Maintenance and updates
- Operational support

EXPANSION

District or city add-on
NT\$3,000,000+

Per added district or new city scope

- New districts
- Additional integrations

How value flows

Citizens

Free reporting, visible status, rewards after verification

Government

Subscription for deployment, operations, and expansion

Partners

Voucher collaboration such as retail or beverage brands

Scale logic

Step 1

Prove reporting quality and cost-saving value in Taipei.

Step 2

Renew and extend to more districts.

Step 3

Replicate to other cities with the same service model.

Revenue grows as the first rollout becomes a repeatable city service

The Taipei pilot is designed to reach breakeven quickly, then improve EBITDA and margin through repeatable city deployment.

BREAKEVEN

Month 2

Under the current Taipei operating assumptions

YEAR 3 MARGIN

35%

Target operating margin after repeatable rollout

EXPANSION LOGIC

Multi-city

Growth comes from added districts and cities

THREE-YEAR VIEW

Revenue EBITDA Net profit

Year 1

NT\$6.5M

Revenue NT\$6.5M · EBITDA NT\$1.0M · Net profit NT\$0.6M

Year 2

NT\$12.0M

Revenue NT\$12.0M · EBITDA NT\$3.8M · Net profit NT\$2.9M

Year 3

NT\$18.0M

Revenue NT\$18.0M · EBITDA NT\$6.8M · Net profit NT\$6.3M

BREAKEVEN POINT

Fast proof, then margin improvement

MONTH 1

-

Deployment and setup period

MONTH 2

✓

Breakeven point

YEAR 3

35%

Operating margin target

After the first Taipei rollout, the platform becomes more efficient because core product, model, and workflow assets are reused.

FINANCIAL PROJECTION

Why the model works

Citizens join for free while governments pay for measurable operating value.

What improves margin

Repeatable software and AI reuse improve economics over time.

SHIELD Team

Abdulhamit Celik

Head of Engineering

Student ID · M11452802

Seasoned experience in web and mobile development for major global clients across sectors.

劉俊佑

Head of Product and Delivery

Student ID · M11452030

Supports AI modeling, research framing, and technical validation for SHIELD.

Ahmad Habibulloh

Head of Strategy and Commercial

Student ID · M11452805

Selected Startup of The 5th Global Talent Entrepreneurship Program and Final Presenter of the 2026 Silicon Valley Program.

王思儒

Head of Data and Community

Student ID · M11452013

Third Place, ISPRS Summer School Competition.

李岳哲

Head of AI and Research

Student ID · M11452017

First Place, ISPRS Summer School Competition.

Graduate Institute of Cross-disciplinary Artificial Intelligence Technology

A clearer bridge between citizens and government.

Citizens experience infrastructure problems every day. We are on a mission to turn their reports into evidence-based, location-aware cases that government teams can verify, prioritize, resolve, and reward.
